

FUNDING FOR QUEBEC MANUFACTURING BUSINESS

Joliette, Quebec - November 2013

Micro-Brasserie L'Alchimiste has been granted financial assistance as government funding for the purchase of updated brewing equipment for their plant in Quebec.

Micro-Brasserie L'Alchimiste produces beers for general consumers, specialty craft beers and private-label beers for distribution all across Quebec. The business, has grown considerably since its establishment in 2001 and is at the stage where it needs to modernize its equipment in order to continue growing.

The funded project involves the installation of fermenters, a conditioning tank and packaging and handling equipment for the brewery. The plant also intends to automate part of the production line, increasing productivity and improving capacity.

The Government of Canada believes economic prosperity is achieved through investments like the one Micro-Brasserie L'Alchimiste is making to raise its production capacity and competitiveness," said a government spokesperson.
